SUPPLEMENTS TO THE MONTHLY WEATHER REVIEW.

During the summer of 1913 the issue of the system of publications of the Department of Agriculture was changed and simplified so as to eliminate numerous independent series of Bureau bulletins. In accordance with this plan, among other changes, the series of quarto bulletins—lettered from A to Z—and the octavo bulletins—numbered from 1 to 44—formerly issued by the U. S. Weather Bureau have come to their close.

Contributions to meteorology such as would have formed bulletins are authorized to appear hereafter as Supplements to the MONTHLY WEATHER REVIEW. (Memorandum from the Office of the Assistant Secretary, May 18, 1914.)

These supplements comprise those more voluminous studies which appear to form permanent contributions to the science of meteorology and of weather forecasting, as well as important communications relating to the other activities of the U. S. Weather Bureau. They appear at irregular intervals as occasion may demand, and contain approximately 100 pages of text, charts, and other illustrations. Copies may be procured at the prices indicated below by addressing the Superintendent of Documents, Government Printing Office, Washington, D. C.

SUPPLEMENTS PUBLISHED.

No. 1. Types of storms of the United States and their average movements. By E. H. Bowie and R. H. Weightman. Washington, 1914. 37 p. 114 ch. 4°. Price 25 cents.

No. 2. I. Calendar of the leafing, etc., of the common trees of the eastern United States. By G. N. Lamb. 19 p. 4 figs. II. Phenological dates, etc., recorded by T. Mikesell at Wauseon, Ohio. By J. Warren Smith. 73 p. 2 figs. Washington, 1915. 4°. Price 25 cents.

No. 3. (Aerology No. 1.) Sounding balloon ascensions at Fort Omaha, Nebr., May 8, 1915, etc. By W. R. Blair and others. 67 p. 23 figs. Washington, 1916. 4°. Price 25 cents.

No. 4. Types of anticyclones of the United States and their average movements. By E. H. Bowie and R. H. Weightman. Washington, 1917. 25 p. 7 figs. 73 ch. 4°. Price 25 cents.

No. 5. (Aerology No. 2.) Free-air data at Drexel Aerological Station: January, February, and March, 1916. By W. R. Blair and others. Washington, 1917. 59 p. 6 figs. 4°. Price 25 cents.

No. 6. Relative humidities and vapor pressures over the United States, including a discussion of data from recording hair hygrometers for a period of about 5 years. By P. C. Day. Washington, 1917. 61 p. 7 figs. 34 charts. 4°. Price 25 cents.

No. 7. (Aerology No. 3.) Free-air data at Drexel Aerological Station: April, May, and June, 1916. By W. R. Blair and others. Washington, 1917. 51 p. 4 figs. 4°. Price — cents.

FREE-AIR DATA AT DREXEL AEROLOGICAL STATION. APRIL, MAY, AND JUNE, 1916.

By the AEROLOGICAL DIVISION, WILLIAM R. BLAIR in charge.

In the 91 days of this period 140 free-air observations by means of kites were made. Of these 49 were made in April, 49 in May and 42 in June. The mean altitudes reached were 2015 meters above sealevel in April, 2460 in May, 2576 in June, and 2339 for the period.

On April 10 cirrus and cirro-stratus clouds changed rapidly in direction from west at 10 a. m., through northwest and north-northwest to north by noon.

A severe thunderstorm occurred on June 21 at about 1 p. m. The lowering of temperature resulting from this storm extended to an altitude of about 1600 meters above sealevel, as shown in the data obtained in the first flight on that day. At the time of the second flight, about two hours later, the temperature had returned to practically the same value it had before the occurrence of the thunderstorm.

a Actual 24-hour mean temperature, 8.7°.

b Actual 24-hour mean temperature, 15.8°.

c Actual 24-hour mean temperature, 18.6°.

d At surface, 528 meters above sealevel.

A comparison of mean monthly temperatures for this period with the 5-year means at Mount Weather for the same months, is presented in Table 1. The departures at the surface are negative for all three months, but greatest in April. In this month negative departures increase from -1.8 degrees (C) at the earth's surface to -4.3 degrees at 4,500 meters. There is little variation from 1,250 to 3,750 meters, the departure being about 3.2 degrees. In May the departure changes from negative at the surface to positive at 1,000 meters and continues positive to 4,000 meters, the difference being small at all levels. In June the negative departure increases from -0.3 degrees at the earth's surface to -1.8 degrees at 2,250 meters and continues at about this value up to 4,500 meters. Complete data for the three months are given in Tables 2, 3, and 4.

Pressures and winds during the series flights.

During the three months 4 series of observations of diurnal variation were made. There were 8 successive flights on April 28-29; 10 on May 4-6; 9 on May 25-26; and 8 on June 28-29. The average heights of the highest points reached in each series were, in chronological order, 2,036, 3,492, 2,622 and 2,968 meters above sealevel. The duration of each series and the temperatures observed are shown in figures 1 to 4. Weather conditions, except the pressure distribution, and all other observed data may be seen in Tables 2 to 4.

At the beginning of the series of April 28-29, a ridge of high pressure extended from the Lakes Region to southern Texas, with a highest pressure of 1,022 millibars over eastern Texas. A pronounced LOW, 987 millibars, was central north of Montana and a moderate LOW, 1,006 millibars, over southern Arizona. During the series the HIGH moved eastward to the Atlantic coast, the northwestern LOW moved to Lake Superior and the southwestern LOW to northern New Mexico. The winds at the surface were south to south-southwest; winds aloft were southwest, shifting late in the series to west.

The series of May 4-6 is the longest thus far made and one of the best, except for a break from 10 p. m. of the 4th to 6 a. m. of the 5th, during which interval surface winds were too light for flying. On the morning of May 4 a LOW, 995 millibars, was central over Manitoba, almost directly north of Drexel. There was no well-developed HIGH. As this LOW passed eastward the surface winds changed from south-southwest through west and northwest to north. On the 5th a moderate HIGH, 1,019 millibars, was central over the Gulf States and a LOW, 1,002 millibars, was over Alberta. During the remainder of the series the southern HIGH remained practically stationary, and the northwestern LOW moved southeastward to eastern Nebraska. Winds at the surface during the 5th and 6th were south to west-southwest; winds aloft were west-southwest to west-northwest.

The weather conditions during the series of May 25-26 were entirely controlled by a trough of low pressure, 999 millibars, extending, on the morning of the 25th, from South Dakota to Colorado. This trough moved northeastward during the series and at 7 a. m. of the 26th extended from North Dakota to Iowa. The surface winds were, therefore, south-southwest and southwest shifting to north-northwest and northwest. Aloft they were southwest and west-southwest.

When the series of June 28-29 was begun, pressure was high, 1,023 millibars, over Michigan and low, 1,004 millibars, over Wyoming. This pressure distribution continued practically without change throughout the series. Winds at the surface were, for the most part, southeast to southwest; aloft they were south-southwest to west-southwest.
